

Dog API Lab

Objective

- Create a React web app to display images of dogs.

Directions

- Read the documentation for <https://dog.ceo/dog-api/>
- Use `axios` to make the http request.
- On page load an image of a dog should render to the page.
- For each button click a new image of a random dog should render to the page.

Stretch

- Add a carousel of random dogs to the bottom of the page.
- Add a search bar such that a user can search for a specific breed. On button click render an image of that breed.

Doggos and Puppies
